Design Notes

Mash-in at 146F for 15 min; raise to 156F for 30 min; raise to 162F for 15 min; mash-out.
After initial fermentation is complete, add oak cubes (2 oz per 5 gal) and age for 3 months.
Rack, then brew a second batch and pitch on top of yeast cake.
Do the same with the second batch; then blend the two batches to target sourness.
Can also use the oak chair leg in carboy method.

Batch Variables and Calculations	
Batch Size (gal):	5.50
Grain Temperature (F):	63
Total Grain Weight (lbs):	11.25
Mash	
Mash Time (min):	70
Desired Mash Temperature (F):	146
Strike Water (gal):	5.96
Strike Temperature (F):	161
Mash Ratio (qts/lb):	2.12
Grain Absorption (gal):	1.41
Mash Volume (gal):	6.86

Brewing Notes

This batch blew the airlock and bung off; not noticed for maybe 36 hours
3/19: sampled; malty, not sweet, with a hint of funk and tartness; no real sourness yet; no hint of a bad infection from the blowoff; check in a month and add oak at that time.
5/7: added oak (12" dowel into the head of the carboy; taped with blue tape.
6/27: sampled; aroma is acidic, sour, wild, fruity, slight malt, wonderful; flavor is initially tart, smooth, very slightly sour with hints of citrus and malt (more than the red); slightly bitter; aroma more pronounced than flavor. Overall very good (should be great when blended).
7/16: transferred to a secondary so that a fresh batch can be collected on top of the yeast cake. 1.008 SG (5.6% ABV); aroma is just wonderful; flavor is delicious; sourness is only slight; huge 0.25" thick white pellicle on top; sourness a bit less pronounced than the red. Placed the oak dowel in the secondary.
11/10: sampled; aroma of stinky feet; will let sit for a while to see how it ages.

1/6/17: kegged 5 gal.
